

# DIGITAL MANAGEMENT IN THE POST- PANDEMIC ERA

## Synopsis

Advancement in semiconductor fabrication and computer science over the past decades has revolutionized the way in which organizations operate, a phenomena commonly known as Digital imperative. As the speed of the Digital imperative accelerates, organizations must regularly review and update their technological platforms so as to reflect the market, competition, technological and societal need.

The global lockdown as a consequence of COVID-19 presented a whole new set of challenges to the corporate world where new solution chains that run deep across processes, people and technology became the foundation of which the shape of things to come will be depended upon.

Fundamental rethinking on data security; enhanced productivity tools that facilitates better interpersonal communications with multiple remote sites; electronics fund transfer and digital currency; digital commerce; data analytic; the applications of artificial intelligence and the implication of emerging technology such as quantum computers should be explored at a strategic level by top executives of all organizations who wish to survive and thrive in the coming decades.

19 MAY 2023  
09:00 - 17:00

FRIDAY

BALLROOM,  
LEVEL 7,  
CORDIS HOTEL,  
MONGKOK

KEYNOTE SPEAKER
